Everything You Need to Know About DNS Attacks

Tuesday, May 23, 2023 | 10AM PT / 1PM ET

[REGISTER NOW](#)

Frank, DNS is a critical part of the organization's digital infrastructure, but also one of the least understood. How can organizations protect their DNS infrastructure from attack? How can organizations use DNS to defend themselves against modern threats?

In this webinar, experts discuss the tools and processes involved in mounting a network defense using DNS. Learn how to avoid the pitfalls associated with adding a DNS security approach to your enterprise security strategy.

During this webinar you will:

- ▶ Find out about the latest ways threat actors are leveraging DNS for cyberattacks including, domain hijacking, DNS tunneling, and denial of service (DoS).
- ▶ Get professional advice about how to use DNS on the front lines of protection against phishing and other common attacks.
- ▶ Dig into the challenges of securing DNS infrastructure and the tools available to help.
